What Is a Root Canal?

A root canal is a dental procedure that removes infected or inflamed pulp from inside the tooth, cleans the root canals, and fills the space to prevent further infection. It is often needed when tooth decay, trauma, or infection reaches the inner nerve of the tooth.

Signs You May Need a Root Canal

1. Severe Tooth Pain

Constant or throbbing pain, especially when chewing, is a major sign of infection.

2. Sensitivity to Hot and Cold

Lingering sensitivity even after removing the source may indicate nerve damage.

3. Swollen or Tender Gums

Swelling around the affected tooth is a sign of inflammation.

4. Tooth Discoloration

Darkening of the tooth may mean reduced blood flow or nerve death.

5. Abscess or Infection

Pus, swelling, or a pimple-like bump on the gums usually requires immediate treatment.
